

Polishing Edge

Polishing Edge

Polishing Edge is step two in Clarity1's brand new and class leading 3-step paint finishing system. Used to remove any buffing marks remaining from Step 1, Polishing Edge is a light to light-medium polish that will effortlessly remove swirls, wash marks and other minor imperfections while leaving an extremely high gloss finish

Polishing Edge was developed over months of testing and 100's of man hours on different paints using a combination of machines, pads and buffing speeds. Testing achieved outstanding results with either a contemporary large throw orbital machine or a rotary/high speed polisher. Changing polisher speeds and pads will alter results making Polishing Edge one of the most versatile products on the market. Use as a second step or independently.

Like the other products in the Clarity1 3 Step system, Polishing Edge is will not break down prematurely giving the user ample time to correct the target area.

Polishing Edge is not dusty, will not gum up as long as pad is kept clean and simply wipes away. To complete the 3 Step process, we recommend following Polishing Edge with our Mesallion Finishing Polish to achieve a showroom shine with incredible depth of color and clarity.

Blended with only the newest and highest grade components, Polishing Edge sets a new standard for light to medium polishing agents.

FEATURES:

- Body Shop Safe

- No waxes, silicones or fillers
- Removes light to light-medium imperfections
- Removes swirls/buffing trails
- Will not gum up pad
- Long buffing time
- No harsh abrasives
- Dust and streak free
